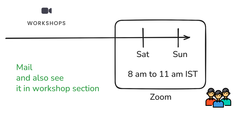
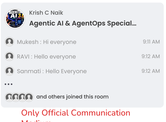
1. Platform Overview
2. Course/Syllabus Overview
3. Class Notifications
4. Personal Branding + Getting out there
5. FAQ / Path to AI Mastery
6. Live Questions & Answers - 1:1 properly



Mail
and also see
it in workshop section

atleast
24 hours
so that
we can
update
recordings
& resources



Only Official Communication
Medium

8 am to 11 am IST + Doubt Solving Session 1:1 (Q mode)

Teaching

Agentic 2.0 vs Agentic 3.0

We gave you complimentary access to the 2.0 batch.

Langchain newer version
Claude Code, Openclaw

Agentic 3.0

2. LLM Subscription, Tools, Softwares

AWS, GCP, Azure -> All have good Trials, we will try to use it.

3. Use Your Personal laptop.

4. Pre-requisite

Do I need AWS / GCP / Azure experience or accounts already?

- Account we will try for Trial wherever Possible.
- Its better if you have an experience or else please follow the mentor properly.

What will I actually build — is it just toy demos?

How do the 9 projects connect — do they get harder, or are they separate?

QnA

Please keep patience and wait for your turn :)

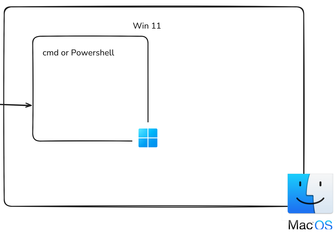
Day - 2
28th June 2026

1. Windows Installation
2. Python AI + Pydantic - Revision of Python + Pydantic Library
3. QnA

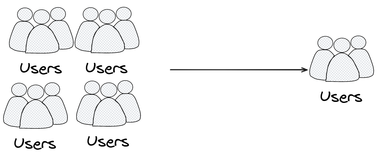
I focus on the concepts and basics first.

Vscode
Gitbash

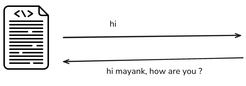
Python UV



Linus/unix based machine



AI will now write all the code but still we should be comfortable in reading it and understanding it.



FakeAPI

Python is a dynamically Typed language which can change the type of my variable or value during runtime.

Python is not Type Safe

Helps us to create rigid Data models for our inputs and output

Making our Code more error safe. & our Agents/Softwares better

We can enforce type and Data Validations
